

# SERVER SIDE MODULE

## CONTENTS

This module has the following files:

1. SERVER MODULE PHASE 2.docx
2. SERVER MODULE PHASE 2.pdf
3. SERVER MODULE PHASE 2 MEDIA.zip

## INTRODUCTION

The client has approached you to build a backend system and frontend web application for a **Financial Management Application** called **PintarMenabung**. The system must allow users to register, manage their wallets, record income and expenses, and view basic financial reports.

## API Configuration

API URL: <http://XX.api-server-module.lksn.id/> (replace XX with your computer number)

## PROJECT OVERVIEW

This project consists of two main phases: In Phase 1, you are required to develop a **REST API** using the **Laravel Framework**, implementing core features such as user authentication, wallet management, transaction recording and financial reporting. In Phase 2, you will build a **frontend web application** that integrates with the API, using either **React** or **Vue** as your framework of choice.

To support your work, media files have been provided, including Postman Collection and Environment, a Database Dump (.sql), and Framework Scaffolding.

## PHASE 2 - Frontend Web Application

| Pages    | Features                                                                                                                                                                                                                                                                                              |

## Shortcuts

| Keymap  | Description                 |
|---------|-----------------------------|
| Alt + W | Open "Add Wallet" form      |
| Alt + N | Open "Add Transaction" form |
| Alt + T | Open "Transfer Money" form  |
| Esc     | Close the form              |

## MEDIA FILES

- HTML Template – to be used as the base layout for the frontend.
- Utility Scripts – helper functions for currency, date formatting, etc.
- Chart-js example code for react and vue.

## INSTRUCTIONS

- You are not allowed to create additional endpoints.
- You can add extra fields to the response body if needed, **just make sure all required fields are included and the response structure is correct.**

## PROJECT STRUCTURE & SUBMISSION

1. Create a root folder named **XX\_SERVER\_MODULE\_PHASE\_2** where **XX** is your computer number.
2. Inside the root folder, organize your files as follows:
  - **XX\_SERVER\_MODULE\_PHASE\_2/**
    - **public/**

- *src/*
  - ...
  - *package.json*
3. Zip the root folder into a single file:  
**XX\_SERVER\_MODULE\_PHASE\_2.zip**
  4. Exclude the following folders when zipping:
    - *vendor/*
    - *node\_modules/*
  5. Submit **XX\_SERVER\_MODULE\_PHASE\_2.zip** to the submission page.
